

Forwarding Multiple Emails at once

Click on new email and then on the 'edit in a separate window' icon

This will open a separate window in your browser which you can resize so that you have your mailbox and the new window open at the same time as shown below.

Then select all the emails you wish to forward by ticking the box on the left of your emails (or select them all by ticking the box to the left of 'Inbox') and just pull them over into the new window
